

Reusable Corner Shipping Support Bracket

P 203 691 5497

F 203 691 5459

Corner Support Bracket: Used to help support a duct with TDC, TDF, or a J Type connector's installed on the end of the duct. The corner support slips over the connector flange (TDC / TDF / J / DM ECT.. and is placed as far on to the flange as it can go. Then a bolt and or screws hold it in place keeping the corner close to its 90 DEG. Configuration.

For best results use one support for each corner on the duct. This helps keep the duct as square as possible when shipping or in a lift situation.

Additionally when installing larger duct if you leave the corner supports on the opposite end you are connecting they will help hold the duct square to aid in securing the duct connection. Then they can be removed in preparation for the next connection.
